Subject Index of Volume 22

Activated cathodes
  new chlor-alkali, 105
Adatoms
  of metals; electrodes modified by microcrystals and, 325
Alloys
  alloying silica supported Sn with Ni and Pd; ^{119}Sn NMR studies on, 503
  Ni and Ni-based; electrocatalytic properties of, 121
  Pb, and commercial Pb; electrode materials for oxygen evolution Co treated Pb *vs.*, 183
Bismuth oxide
  reinforcement of grain boundary barriers by, in low temperature sintered type III materials, 531
Brewer intermetallic phases
  as synergetic electrocatalysts for hydrogen evolution, 1
Calcium
  subsolidus phase relationships in SrO–CaO–CuO–O and $SrO–Y_2O_3–CuO–O$ systems, 523
Carbon dioxide
  photocatalytic reduction of, 249
Carbon materials
  electrocatalysis on, 377
Catalysis
  catalytic reduction of O_2 at polyaniline cathodes in presence of Cu^{II}, 401
  and electrocatalysis; new oxometalate-based materials for, 77
  electrocatalytic activity and surface geometry, 309
  multi-electron transfer; transition metal cluster materials for, 281
  photocatalytic reduction of CO_2, 249
Chlorine
  chlor-alkali activated cathodes, new, 105
  and hydrogen evolution characteristics of ion implanted electrode materials, 149
Cluster
  transition metal, materials for multi-electron transfer catalysis, 281
Cobalt
  electrode materials for oxygen evolution Co treated Pb *vs.* commercial Pb and Pb alloys, 183
Copper
  catalytic reduction of O_2 at polyaniline cathodes in presence of Cu^{II}, 401
  subsolidus phase relationships in SrO–CaO–CuO–O and $SrO–Y_2O_3–CuO–O$ systems, 523
Crystals
  electrocatalysis of oxygen on single crystal Au electrodes, 349
  electrodes modified by microcrystals and adatoms of metals, 325

Electrocatalysis
  on carbon materials, 377
  and catalysis; new oxometalate-based materials for, 77
  of oxygen on single crystal Au electrodes, 349
Electrocatalyst(s)
  materials research and development of, for alkaline water electrolysis, 27
  N_4 macrocycles as, for cathodic reduction of oxygen, 457
  oxide, materials: comparative behaviour of kinetically significant surface intermediate states in anodic O_2 evolution at; participation of mediator Redox couples in oxide, 163
  synergetic; Brewer intermetallic phases as, for hydrogen evolution, 1
Electrocatalytic activity
  and surface geometry, 309
Electrocatalytic properties
  of Ni and Ni-based alloys, 121
  and structure; pyropolymers of N_4-complexes, 477
  and surface properties; effect of preparation on, of $RuO_2 + IrO_2$ mixed oxide electrodes, 231
Electrochemistry
  of hydrogen-sorbing intermetallic compounds, 51
Electrode(s)
  anodes:
    Ru–Ti oxide; character of solid solutions in, 203
  cathodes:
    chlor-alkali activated, new, 105

©Elsevier Sequoia/Printed in The Netherlands

polyaniline; catalytic reduction of O_2 at, in presence of Cu^{II}, 401
ion implanted, materials; chlorine and hydrogen evolution characteristics of, 149
materials for oxygen evolution Co treated Pb *vs.* commercial Pb and Pb alloys, 183
modified by microcrystals and adatoms of metals, 325
$RuO_2 + IrO_2$ mixed oxide; effect of preparation on surface and electrocatalytic properties of, 231
single crystal Au; electrocatalysis of oxygen on, 349
Ti and other valve metal; comparison of various modifications of, 417
Electrolysis
alkaline water; materials research and development of electrocatalysts for, 27

Gold
single crystal, electrodes; electrocatalysis of oxygen on, 349
Grain boundary barriers
reinforcement of, by bismuth oxide in low temperature sintered type III materials, 531

Heat treatment
structure and surface area evolution of vanadia-on-titania powders upon, 511
Hydrogen
and chlorine evolution characteristics of ion implanted electrode materials, 149
electrochemistry of hydrogen-sorbing intermetallic compounds, 51
evolution; Brewer intermetallic phases as synergetic electrocatalysts for, 1

Iridium
effect of preparation on surface and electrocatalytic properties of $RuO_2 + IrO_2$ mixed oxide electrodes, 231
Iron
oxygen reduction on adsorbed iron tetrapyridinoporphyrazine, 431

Kinetics
comparative behaviour of kinetically significant surface intermediate states in anodic O_2 evolution at oxide electrocatalyst materials: participation of mediator Redox couples in oxide, 163

Lead
electrode materials for oxygen evolution Co treated Pb *vs.* commercial Pb and Pb alloys, 183

Microcrystals
electrodes modified by, and adatoms of metals, 325

Nickel
and Ni-based alloys; electrocatalytic properties of, 121
and Pd; ^{119}Sn NMR studies on alloying silica supported Sn with, 503
Nitrogen
N_4 macrocycles as electrocatalysts for cathodic reduction of oxygen, 457
pyropolymers of N_4-complexes; structure and electrocatalytic properties, 477

Oxometalate-based materials
new, for catalysis and electrocatalysis, 77
Oxygen
anodic, evolution: comparative behaviour of kinetically significant surface intermediate states in, at oxide electrocatalyst materials; participation of mediator Redox couples in oxide, 163
catalytic reduction of, at polyaniline cathodes in presence of Cu^{II}, 401
electrocatalysis of, on single crystal Au electrodes, 349
electrode materials for, evolution Co treated Pb *vs.* commercial Pb and Pb alloys, 183
N_4 macrocycles as electrocatalysts for cathodic reduction of, 457
reduction on adsorbed iron tetrapyridinoporphyrazine, 431

Palladium
and Ni; ^{119}Sn NMR studies on alloying silica supported Sn with, 503
Photocatalytic reduction
of CO_2, 249
Polyaniline
cathodes; catalytic reduction of O_2 at, in presence of Cu^{II}, 401
Powders
vanadia-on-titania; structure and surface area evolution of, upon heat treatment, 511
Pyropolymers
of N_4-complexes: structure and electrocatalytic properties, 477

Redox couples
mediator: participation of, in oxide; comparative behaviour of kinetically significant surface intermediate states in anodic O_2 evolution at oxide electrocatalyst materials, 163
Reduction
catalytic, of O_2 at polyaniline cathodes in presence of Cu^{II}, 401
cathodic; N_4 macrocycles as electrocatalysts for, of oxygen, 457
oxygen, on adsorbed iron tetrapyridinoporphyrazine, 431
photocatalytic, of CO_2, 249
Ruthenium
character of solid solutions in Ru–Ti oxide anodes, 203
effect of preparation on surface and electrocatalytic properties of RuO_2 + IrO_2 mixed oxide electrodes, 231

Silica
^{119}Sn NMR studies on alloying silica supported Sn with Ni and Pd, 503
Sintered type III materials
low temperature; reinforcement of grain boundary barriers by bismuth oxide in, 531
Solid solutions
character of, in Ru–Ti oxide anodes, 203
Spectroscopy
^{119}Sn NMR studies on alloying silica supported Sn with Ni and Pd, 503
Strontium
subsolidus phase relationships in SrO–CaO–CuO–O and SrO–Y_2O_3–CuO–O systems, 523
Subsolidus phase relationships
in SrO–CaO–CuO–O and SrO–Y_2O_3–CuO–O systems, 523
Surface area evolution
and structure of vanadia-on-titania powders upon heat treatment, 511
Surface geometry
and electrocatalytic activity, 309
Surface intermediate states
kinetically significant: comparative behaviour of, in anodic O_2 evolution at oxide electrocatalyst materials; participation of mediator Redox couples in oxide, 163
Surface properties
and electrocatalytic properties; effect of preparation on, of RuO_2 + IrO_2 mixed oxide electrodes, 231

Tetrapyridinoporphyrazine
adsorbed iron; oxygen reduction on, 431
Tin
^{119}Sn NMR studies on alloying silica supported Sn with Ni and Pd, 503
Titanium
character of solid solutions in Ru–Ti oxide anodes, 203
structure and surface area evolution of vanadia-on-titania powders upon heat treatment, 511
and other valve metal electrodes; comparison of various modifications of, 417
Transition metal
cluster materials for multi-electron transfer catalysis, 281

Vanadium
structure and surface area evolution of vanadia-on-titania powders upon heat treatment, 511

Water
materials research and development of electrocatalysts for alkaline water electrolysis, 27

Yttrium
subsolidus phase relationships in SrO–CaO–CuO–O and SrO–Y_2O_3–CuO–O systems, 523
